MARK WEISER'S VISION OF FUTURE COMPUTING (LIVING ROOM)

❑ **The best computer is a quit invisible servant.**

➢ The furniture in our living room could be equipped with smart sensors, enabling them to adjust automatically to our preferences. For example, the sofa could adapt its shape.

➢ Auto adjust tv size and position depending on eye straight line.

❑ **The purpose of a computer is to help you do something else.**

➢ Using automated air condition, it will help us to keep our room temperature moderated from the outside. So that we will not feel Spartan.

❑ **The more you can do by intuition the smarter you are; the computer should extend your unconscious.**

➢ Smart Lighting: Install smart lighting systems to adjust the color, brightness, and intensity of the lights according to our mood. Soft and warm lighting can create a calming ambiance, while bright and cool lighting can be energizing. we can control the lighting using voice commands or smartphone apps.

➢ smart fan : automatic turn off/on by appearance and auto regulate with body temperature

➢ automatic blinds for sliding glass windows doors

❑ **Technology should create calm.**

➢ automatic play calm music depending on face expression for making refresh brain and body , body message for comfort.
